Trouble shooting	26
Warranty information	27 – 28
Supplied components	29

MODEL: VD650900

SIZE: 650mm x 900mm

Standard installation frame opening size required: 550mm x 800mm

Frameless installation frame opening size required: 480mm x 730mm

MODEL: VD6501200

SIZE: 650mm x 1200mm

Standard installation frame opening size required: 550mm x 1100mm

Frameless installation frame opening size required: 480mm x 1030mm

MODEL: VD950950

SIZE: 950mm x 950mm

Standard installation frame opening size required: 850mm x 850mm

Frameless installation frame opening size required: 780mm x 780mm

MODEL: VD9501200

SIZE: 950mm x 1200mm

Standard installation frame opening size required: 850mm x 1100mm

Frameless installation frame opening size required: 780mm x 1030mm

MODEL: VD7501600

SIZE: 750mm x 1600mm

Standard installation frame opening size required: 650mm x 1500mm

Frameless installation frame opening size required: 580mm x 1430mm

MODEL: VD7501900

SIZE: 750mm x 1900mm

Standard installation frame opening size required: 650mm x 1800mm

Frameless installation frame opening size required: 580mm x 1730mm

SKYLIGHT INSTALLATION

Note: Installation must be carried out by a competent tradesman such as a registered carpenter or licenced roof plumber. If structural members of the roof need to be adjusted to suit the opening size required consult a structural engineer before amending frame opening. When lining the internal shaft of the skylight for frameless applications ensure the cladding does not touch the glass and has a minimum 5mm gap between top edge of cladding and glass. Skylights are designed to be installed at a recommended minimum 3 – 45 degrees.

Frame opening to size required as per the notes regarding frame opening sizes noted on pages 4 - 9. The skylight must be supported by roof rafters/battens, trim out all four sides as necessary. Check opening is square on each corner

1. Install roof battens 5mm short of the frame opening size on all four sides. (*Skylight is fixed into position on top of roof battens with a 6mm packer for a tiled roof. *Metal roof skylight needs to be packed up to thickness of the roof sheet*)

2. Install supplied mounting brackets using 16mm metal self-tapping screws into the skylight frame as per picture. Install 2 brackets on each side 100mm from each end of the skylight and if required 2 brackets in the centre top and bottom depending on size of skylight. And or in line with roof batten as required.

NOTE: (*For metal roofs only, pack the skylight up above the roof batten thickness of the roofing sheet material being used so that the custom flashing (not supplied by Vivid Skylights) has a minimum 70mm upstand to comply with Australian plumbing regulations.*)

3. Place skylight on roof frame opening, ensuring it is in the correct position from underneath to suit internal cladding of skylight shaft. (For electric opening skylights the motor should be on the lower side of the roof)

4. Using the supplied 30mm timber screws fix the brackets into position.

INSTALLATION OF FLASHING KIT - TILED ROOF

1. Start with the bottom flashing slide it right up under the lip of the skylight. Using supplied 16mm metal self-tapping screw, screw through the side of the flashings only into the skylight frame securing the flashing into position. Ensure it stays tight up under the lip of the skylight frame on each side.

Slip flashing under lip of skylight frame

Slip flashing under lip of skylight frame

2. Next install the side flashings under the skylight lip and OVER the bottom flashing and using screws to secure it into position.

3. Fold tab of bottom flashing over edge of side flashing to hold in place.

4. Finally install the top flashing under the lip of the skylight and OVER the side flashings. (Do not screw any fixing down through the flashing as it may cause it to leak)

5. Wipe down skylight frame and side edge of flashings ensuring they are dry and dust free.

6. Using roofing silicone, run a thick bead of silicone under the lip of the skylight to seal the skylight and roof flashing on all four sides. (This applies for installation on metal roofs with custom flashings)

FLAT ROOF FLASHINGS

A custom flashing is required to install skylights on metal, flat or low pitch roofs (less than 15 degrees). (Vivid Skylights do not provide custom flashings). Custom flashings must be installed by a registered roof plumber and sealed under lip of skylight.

INSTALLING ROOF CLADDING

1. Ensure roof battens are installed under flashing kit to support it
2. Tiles or metal roofing must be cut 100mm from bottom of skylight frame to ensure it doesn't push up the bottom flashing and cause pooling of water. (If tiles are still high chamfer off the top edge of the tile to flatten it off).
3. Cut remaining tiles 30mm from edge of skylight frame
4. Once complete using a rubber mallet lightly tap the bottom flashing to form the profile of the roofing it has been installed to.

ELECTRIC BLIND INSTALLATION AND WIRING

**Drill appropriate size hole through substrate for electrical wiring connection and thread cable through before fixing into position*

Note: Face the 'white' side of the blind up to the glass and the 'black' side facing the floor

Note: Always use a licensed electrician to connect blind wiring. The blind has an internal transformer. 240V can be connected to the blind cable. For multiple blinds, each blind needs to be able to be switched off separately for programming purposes.

Note: Electric Blind remotes supplied are already preprogrammed for the blind. If required a 7mm hole can be drilled through bottom of skylight frame to thread blind cable through.

Electric blind remote programming with electric opening skylight. (And reprogramming standard blind remote)

Press “left or right buttons” on remote control to shift between different channels such as channel 1, 2, 3, 4 etc. Choose a channel that you want to program for the blind.

Note: If it is also an opening skylight the blind will need to be on a separate channel to the programming of the opening skylight.

1. Connect power for electric blind, once power is on the blind motor will vibrate a little.
2. Then press P2 key at the back of the remote control for 3-5 seconds. (open back cover) Blind will move a little at this time then press P2 again.
3. Flip remote over to the digital display side and press the “up” button
Programming of blind is now complete. (wait 5 seconds before using remote)

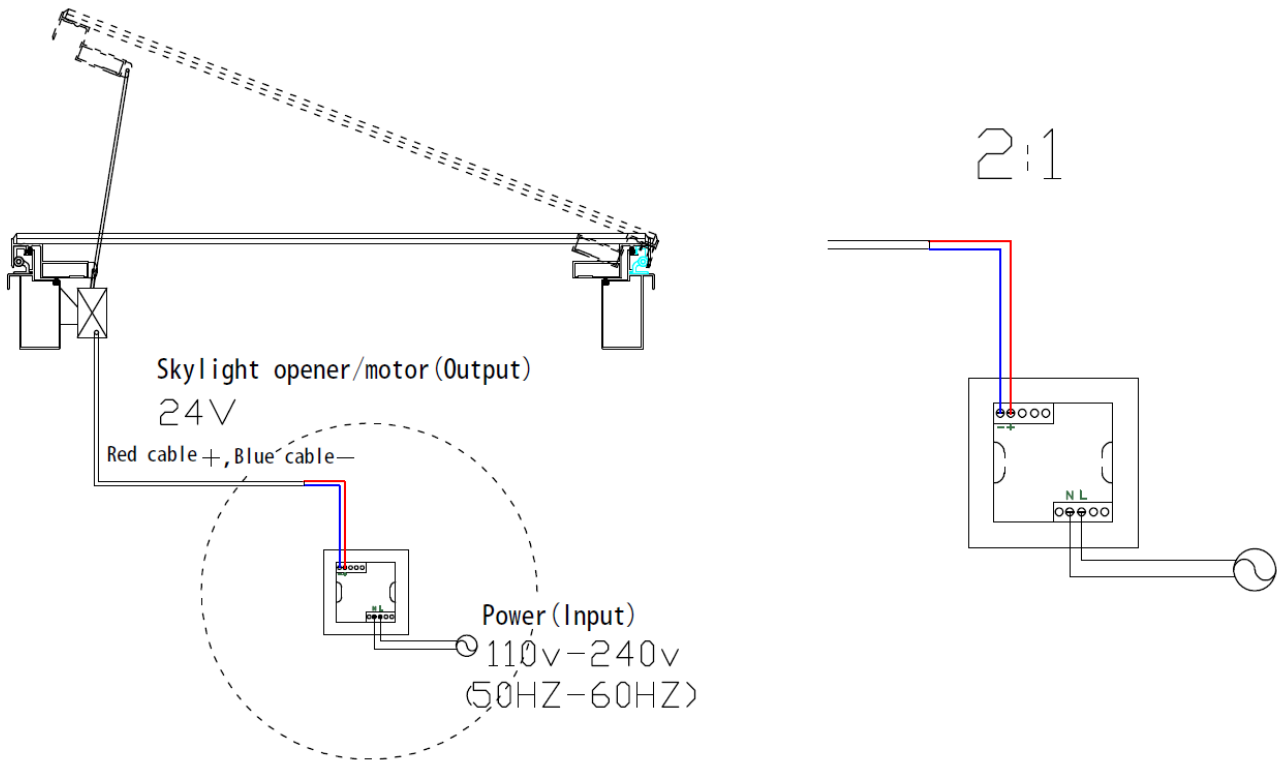

Using the remote

1. Select the channel the blind has been programmed to using the “left or right buttons” such as channel 1 or 2 or 3 etc.
2. Then press the “up or down buttons” to raise or lower the blind.
3. To stop the blind press the centre button in between the up and down buttons.

ELECTRIC WIRING OF OPENABLE SKYLIGHTS

Important Notes:

- **When installing skylight, the motor is to be on the lower side of the roof**
- **The power input terminal and output terminal cannot be reversed, otherwise the control box will burn out.**
- **The skylight motor is 24V and the 110 – 240V voltage cannot be directly connected to it otherwise the motor will burn out**
- **Always use a licensed electrician to connect wiring of opening skylights.**
- **It is highly recommended that the skylight is closed when exiting the building in case there is a power outage in your area, when rain starts to fall.**

ELECTRIC OPENING SKYLIGHT CONTROLLER AND REMOTE PROGRAMMING

Skylight wall controller

Remote

1. On the remote press “left or right buttons” on remote control to shift between different channels such as channel 1, 2, 3, 4 etc. Choose a channel that you want to program for the opening skylight.

Note: All electric skylights have been pre-programmed for channel 1, skylights can normally be opened and closed on channel 1. Max motor running time is 5 minutes.

Note: If there is also a blind being installed with the opening skylight, it will need to be on a separate channel to the programming of the blind.

2. Ensure power is connected. Press middle “stop button” for 5 seconds on skylight controller, indicator light will have a short flash.

3. Then press “UP” on the remote for 0.5 seconds.

4. The wall controller will then make x3 short “beeps”. Programming is now complete.

Deleting all previous programming memory

1. Connect power for skylight
2. Press middle “stop and close button” on wall controller simultaneously for 5 seconds, it will then make x3 shorts “beeps”.
Previous programming memory is now deleted.
To reprogram follow programming steps from previous section of how to program skylight controller and remote.

Deleting only 1 program in remote memory

1. Connect power for skylight. Press “Stop” on wall controller for x5 seconds so that it is in programming state.
2. On remote, select which program channel you would like to delete, then press the “Down” button on remote transmitter for 0.5 seconds. Wall controller will then make x3 short “beeps”. Previous programming memory is now deleted. To reprogram follow programming steps from previous section of how to program skylight controller and remote.

PROGRAMMING SOLAR RAIN SENSOR

1. Ensure power is connected. On wall controller press “Stop” button for x5 seconds, it will then flash.
2. Using a blunt pin or similar that will fit, on the rear of the solar rain sensor press inside the hole. Programming is now complete.
3. Place and secure rain sensor in a suitable position outside on the roof near the skylight where it will receive enough sun to charge the battery and rain during wet weather to activate the closing of the skylight. It needs to be in close proximity to the wall controller to ensure strong signal.
4. Test rain sensor by using a spray bottle set on “misty” and lightly spray on rain sensor. (Batteries may need time to charge before it is able to operate)

Using the skylight remote

1. Select the channel the opening skylight has been programmed to using the “left or right buttons” such as channel 1 or 2 or 3 etc.
2. Then press the “up or down buttons” to open or close the skylight.
3. To stop the skylight press the centre button in between the up and down buttons.

Skylight shaft cladding

Skylights shafts can be cladded with many different claddings. The most common to draw in maximum light into the room is plasterboard. It is important to leave a 5mm gap in between the skylight frame and or 10mm gap (from glass for frameless shafts). This is to create a thermal break and reduce condensation from glass running down the shaft cladding of high humidity areas or where internal and external temperatures may vary dramatically.

For best results when plastering the shaft use tear away beads at the top and plaster beads for internal corners to create sharp shaft lines.

Wet area installations additional information

If skylight is being installed in a wet area such as a bathroom it is advised not to be installed directly over a shower.

An additional ducted exhaust fan is advised to be installed in the shaft where a skylight is installed in a wet area.

FLYSCREEN INSTALLATION

1. Slide across to unlock, to then be able to remove the inner screen section

2. Fix x4 screws through the flyscreen frame into the shaft of the skylight (before plastering shaft).

3. Re-insert inner screen section into flyscreen frame and slide lock across to secure into position.

TROUBLE SHOOTING

1. Electric skylight wall controller issues?

Switch power off to wall controller for 1 minute then turn back on and follow steps to delete the existing programming and then follow steps to reprogram the wall controller.

2. Electric skylight is vibrating or motor sounds like it's struggling to open and close the skylight?

The gas strut arms that hold the skylight up most likely have dust build up on them from the installation or dust build up over time since install, spray WD-40 lubricant along the gas strut arm that goes inside the other. Open and close the skylight a couple of times.

If the problem persists further investigation is required such as whether there is adequate power supply or any obstructions in the way slowing down the opening of the skylight.

3. Electric skylight remote not working?

Check power is connected to the skylight. Follow the steps to reset the programming and try again. If there is another skylight/s nearby they need to be able to be switched off individually with an isolator switch as when trying to program it with the remote it will get confused on which skylight is being programmed.

When programming a skylight follow instructions thoroughly and allow time between pressing buttons especially at the end as the skylight will take a few seconds to register the programming before you can use it.

When using the remote allow a few seconds when pressing the button for the skylight to open and close, don't continually press buttons as it will cause the skylight to reprogram. If this happens you will need to delete the programming and reprogram the remote.

4. Rain sensor not working?

For an initial installation, you need to leave the sensor out in the sun for a couple of hours so the rechargeable battery can charge. Place sensor on roof where it receives direct sunlight as well is in close proximity to where the internal wall controller is located. Try deleting memory on the wall controller and reprogram it. The rechargeable battery might need to be replaced.

For existing installations rechargeable battery in rain sensor may need to be replaced and try deleting memory on the wall controller and reprogram it.

5. Blind not closing or blind only partially closing?

Check power is connected to the blind. Follow the steps to reset the programming and try again. If there is another blind/s nearby they need to be able to be switched off individually with an isolator switch as when trying to program it with the remote it will get confused on which blind is being programmed.

When programming a blind follow instructions thoroughly and allow time between pressing buttons especially at the end as the blind will take a few seconds to register the programming before you can use it.

When using the remote allow a few seconds when pressing the button for the blind to open and close, don't continually press buttons as it will cause the blind to reprogram and will then stop at incorrect places. If this happens you will need to delete the programming and reprogram the remote.

VIVID SKYLIGHT WARRANTY INFORMATION

Openwide Homes Pty Ltd ACN 625 508 045 provides that this product is covered by a 10-year leak-free warranty on fixed skylights and 1 year for electric motors and rain sensors of opening skylights and electric blinds from the date of purchase, against faulty workmanship and/or materials. To make a claim, return the faulty item together with proof of purchase of an invoice or sales receipt to the place of purchase. Any handling and transportation costs (and other expenses incurred in claiming this warranty) are not covered by this warranty and will not be borne by Openwide Homes. The replacement product or part or repaired product will be made available for your collection at an address nominated by Openwide Homes. If your claim is not dealt with by your retailer, contact Openwide Homes using the details below. Where a valid warranty claim is made by the original consumer of the product Openwide Homes will replace the defective product or repair the fault. Where the product is repaired, Openwide Homes may use refurbished parts. This warranty does not cover normal wear and tear, misuse or abuse. Openwide Homes has no other liability under this warranty. The benefits to be given by this warranty are in addition to other rights and remedies of the consumer under a law in relation to the goods to which the warranty relates. Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

What is not covered

- 1.1 This warranty only covers defects that have arisen from the products manufacture
- 1.2 This warranty will only apply if the product has been installed by a licenced roof plumber and carpenter following our strict installation instructions and maintained in accordance with Openwide Homes maintenance guidelines. Without limiting the foregoing of defect claims to which has resulted from directly or indirectly the products installation carried out differently to Openwide Homes installation guidelines, good workmanship, installation of product outside of recommended locations and conditions, normal wear and tear, use of not genuine Openwide Homes replacement products or components, power supply, transportation and or any inappropriate or insufficient care handling and storing the product. In addition the warranty will not apply to any defects which arise from neglect including but not limited to failure to maintain and/or service the product as described in the installation and maintenance guide. All such instructions can be found on the website www.vividskylights.com.au .
- 1.3 Normal gaining of surfaces as a result from weathering or effects caused by environmental, atmospheric or corrosive substances including but not limited to such as cleaning ages that may cause a reaction to the components of the product are not covered by this warranty
- 1.4 Glass corrosion due to debris or standing water on glass are not covered by this warranty
- 1.5 This warranty does not cover without limitation problems with product damage, malfunction, restricted or reduced function and or water leakage. Which were resulting factors from accidents, blocking or alike of branches, twigs, leaves, ice or snow etc, including without limitation poor workmanship, building design, building movement, acts of God/nature, where applications have high humidity without appropriate ventilation or humidity control, water penetration from ice damming, variations in glass coloration, damage or other issues caused by adverse environmental conditions including to but not limited to acid rain.
- 1.6 The warranty excludes any claim relating from condensation water damage which may occur as a result of humidity inside or outside of a building or variation between indoor/outdoor temperatures this is not a defect.
- 1.7 This warranty specifically excludes any leaks due to any of the following: re-roofing without using a licenced roof plumber, Openwide Homes approved flashings, capping and or sealants. Claims relating to a product left open during rain or other, moisture penetration at seams in the roof deck, incorrect installation of the product, rough opening sizes other than those issued in the Openwide Homes installation instructions, non or improper maintenance of the product or installation, accidental breakage, misuse, abuse, poor building design and construction, act of nature/God, corrosive environmental factors including acid rain and or any other factor unrelated to the original installation guidelines of the product are not covered by this warranty

- 1.8 Extreme weather conditions such as severe rain, hail, lightning, snow, large roof areas above a roof window (water should be diverted away from roof window), roof pitches above 45 degrees are not covered by this warranty. In case of flood and water overflowing the roof window, this is considered acts of nature/God and is not covered by this warranty.
- 1.9 This warranty also does not cover claims relating to the following:
- a. Discoloration of parts that are not visible by general use
 - b. Any change of colour and fading whether or not it has been caused by sun/acid rain/salty rain/condensation/incorrect cleaning products used or any other conditions that may have caused a changing effect
 - c. Minor variations/imperfections in glass that do not affect the product performance or obscure vision
 - d. Any reduction of efficiency of the product such as glazing values and tolerances
 - e. Imperfections in the glass which were present at the time of delivery or have arisen during the warranty period and which do not impair the view
 - f. Corrosion due to industrial and household chemicals
 - g. Exposure to cleaning of other building material near such as but not limited to acid washing bricks and or pressure cleaning of roof etc
 - h. Corrosion of electronic devices due to adverse environmental factors
 - i. Claims in regard to where any film has been applied to the glass surface
 - j. Rain sensor should not be solely relied upon to close skylight during rain, storm or act of God in case the batteries are flat. Rechargeable batteries need to be checked every 6 months and it is advised they be replaced every 12 months. Skylights should always be closed before exiting the building.
 - k. In the event that a malfunction of the rain sensor occurs by not signalling to the wall controller to close or flat batteries. No property damages claims due to skylight remaining open will warranted. Always keep skylight closed when rain/storm is forecasted and when exiting the building.
2. The warranty does not include the following re-installation labour or other damages caused by reinstallation, dents, cosmetic, superficial or other damages that do not impede the reasonable operation of the roof window.
3. The warranty will be voided in the event unauthorized repairs have taken place.
- 4.1 All costs and expenses relating to the replacement of the product will be borne by the end-user such as but not limited to shipping costs, re-installation, speciality equipment such as scaffolds, boom, crane platforms etc and are not covered by this warranty.
- 4.2 A call out fee will apply to the end user if a site inspection is required that will be paid in advance prior to the site visit (this fee will be dependent on site location, only site inspections in Melbourne are able to be conducted). If it is determined that the installation is correct and the product is faulty this call out fee will be refunded to the end user. For a site inspection to be completed appropriate fall protection/scaffold or access will need to be provided by the end user prior to the inspection taking place.
5. The end user is solely responsible for maintaining and minimising water damage or any other damage that the product may cause, including all costs and expenses associated with temporary covering the roof opening whilst the product is repaired or replaced.
6. For all product related enquires and warranties please email sales@vividskylights.com.au
7. Warranty and installation guides are subject to change without notice.

SUPPLIED INSTALLATION COMPONENTS AND TILED FLASHING IF APPLICABLE

X18 self-tapping screws

X16 timber screws

X6 brackets

X1 top roof flashing

X1 bottom flashing

X2 side flashings
